## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Shiobara et al.

Shiobara et al., as seen in Fig. 4, includes a housing (4) as claimed, a tip ball (6) as claimed, a biasing element (7) as claimed, and a ball pusher (8) as claimed.

2. Claims 1-9, 11-13 and 15-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Okamoto et al.

Okamoto et al., as seen in Fig. 4, includes a housing (2) as claimed, a tip ball (1) as claimed, a biasing element (6) as claimed, and a ball pusher (5, 5a) as claimed.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 10 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okamoto et al. in view of Shiobara et al.

Although the support element (5) of the Okamoto et al. reference does not include at least one cut out portion from a front face to a rear face thereof, attention is directed to the Shiobara et al., which discloses an analogous point assembly having a ball pusher with a support element portion and a contact element as claimed; wherein the support element have cut out portions from a front face to a rear face thereof to provide ink passages thereat. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to employ, on the Okamoto et al. support element device, cut out portions as, for example, taught by Shiobara et al. in order to provide a better ink flow.

#### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schwartzman discloses another point assembly for an applicator.
